

MPC-14: A-37 Upgrade Program

This A-37 upgrade program is available to Z-ION customers only.

Spectra is offering a special price to Z-ION customers that want to upgrade their MPC boards to the A-37 version so they can take full advantage of the Z-ION system capability.

To upgrade to A-37 order **KIT-MPC-A37FUPG** \$325 list (distributors get the standard discount off this price).

A-36 boards can be returned for a \$100 core credit via the RMA process. We will test the board when received and issue a credit if the board tests good. We will then put the good boards in inventory as a "Reman" MPC board part number **KIT-MPC-A36R**; which sells for \$400.00 list (standard distributor discounts apply).

Unfortunately we can only accept A-36 boards as cores. It is recommended customers with older MPC boards keep them as a spare.

The A-37 version of the MPC-5000 has one major programming change; the flush cycle is now set in days where all previous versions were set in hours.

The normal 5 day flush cycle on the A-36 boards was set at 120 hours, A-37 boards are set at 5 (days) and with a Z-ION you can now set the flush cycle at 30 days.
