Freshwater Flush Pressure Regulator Kit:

When a freshwater flush begins on an automated system, the first thing that occurs is energizing the flush solenoid to snap open a plunger and allow pressurized freshwater to flood the system. On occasion, particularly in newer boats with stronger freshwater pumps, the strength of incoming pressurized freshwater can hinder the freshwater flush solenoid’s ability to initially open, fully open, or remain open for the entirety of the flush cycle. This situation can lead to confusing alarms during flushes and prevent the system from being adequately flushed. To help alleviate this, we have created a simple kit to monitor and regulate the pressure of the incoming pressurized freshwater (seen below). This can easily be plumbed inline in minutes at time of install, or retrofit to any system with this concern.

KIT-FWPG Freshwater Pressure Regulator Kit

1/4" WATER PRESSURE
REGULATOR
PL-PRG-1/4P

2.5"D, 1/4"NPT GAUGE
0-200PSI/BAR UC
PL-PSG-LP2.5

1/4" NPT CLOSE
NIPPLE NYLON
PL-NP-1/4N

1/4"NPT X 3/8" TUBE FITT
ST. JG
PL-MTS-1/4X3/8J
