

## PowerSurvivor 40E Kit Reference

*In most cases, the PS40E can be serviced and returned to operational with one of three kits; the Plunger Rod Kit, the Spool Valve Kit, and Repair Seal Kit.*

- The Repair Seal Kit (8012610) contains all of the internal wearable pieces.

- The Spool Valve Kit (8016525) comes with the unit and is a highly recommended spare. After a bucket test, it is the first suggestion when water moves through the system easily, but no product water is being made.

- The Plunger Rod Kit (8013877) can be used to fix most leaks at the piston near the gearbox. Typically, the rod becomes scored because of prefilter failures.
